

Safety begins before driving.

When preparing to drive, it is important to make sure our vehicle is in good condition in order to have a safe journey, without any surprises. Adequate vehicle maintenance will ensure greater durability, safety, economy and care with the environment.

Let us see what must be taken into account for this...

- **Tires** - We must check if the **4 tires** are from the **same brand** and have the same **features**. Control air pressure **once a week** according to the manufacturer's instructions.
Measure pressure with **cold** tires.
Remember to check the condition of the **spare tire**.
- **Engine oil level** - This must be between the minimum and maximum reference marks. The oil change must be made according to the type of oil you use. Consult the vehicle's manual or a specialist technician.
- **Engine coolant** - The **engine must be cold** when conducting the inspection, the level should be between the minimum and maximum marks. **Annual inspection and change** are recommended. Check if your vehicle needs a specific fluid in the manual or with a technician.
- **Brake fluid** - Its **inspection must be conducted annually** by a specialist technician
Check that the level is not below the minimum, which would indicate a leak. If this happens, consult a technician immediately.
- **Air filter** - Perform a **semi-annual inspection**.
- **Oil filter** - Replace it every other oil change.
- **Fuel filter** - Once a year.
- Is always important to **check the state of the wiper blades**, which must be in good condition to adequately fulfill their function. It is also important to **check that we have fluid** for them to work when needed. Don't forget that the windshield wiper helps us keep the windows clean, enabling a better view of the road.
- Another important point is to **verify that all lights**, headlights and taillights, are **working**, as well as the correct functioning of the turn signals.

In case of doubt, always consult the manual or a specialist technician.

Keeping all these elements in mind will help the vehicle to have a better performance on the road, contributing to our safety when driving.

Keep your car in good condition, drive responsibly and safely.
